

E-Commerce Sales Analysis - Business Problem

An e-commerce company is experiencing inconsistent revenue growth across months and categories. There are fluctuations in sales, with some periods showing negative growth. Additionally, cancelled orders are negatively impacting profitability. The company wants to identify key drivers of revenue, understand seasonal trends, and reduce losses to improve overall performance.

Key Observations:

- Revenue fluctuates across months
- Some months show negative growth
- Electronics category contributes highest revenue
- Cancelled orders reduce profit
- Orders and quantity do not always align with profit

Business Objectives:

- Improve revenue growth consistency
- Identify high and low performing months
- Optimize product category performance
- Reduce order cancellations
- Increase overall profitability

Solution Approach:

An interactive Power BI dashboard was developed to analyze revenue, profit, orders, and growth trends. The dashboard allows filtering by category, year, and order status, helping stakeholders make data-driven decisions.
